

Brix C. Bitayo

Software Engineer

As a third-year Computer Science student, I have worked on a variety of projects that have strengthened my skills in software development, problem-solving, and algorithm design. I have experience building applications, collaborating on team projects, and applying theoretical concepts to practical solutions. My passion for technology and eagerness to learn allow me to adapt quickly to new tools and challenges while delivering efficient and effective solutions.

- Lapu-Lapu City, Cebu, Philippines

Education

2022 - 2026

Cebu Institute of Technology University
Bachelor of Science in Computer Science

2020 - 2022

University of Cebu - LM
STEM Strand (Science, Technology, Engineering, and Mathematics)

2016 - 2020

Bankal National High School
Junior High School

Skills

- Communication Skills
- Collaborative Problem-Solving
- Time Management
- Critical Thinking
- Leadership and Coordination

Projects

2024 - Present

JavaScript, PHP, SQLite, Data Analytics

MoodleQuest

Developing MoodleQuest, a gamified system designed to enhance student engagement and motivation in asynchronous learning environments. The platform integrates interactive features such as quests, virtual rewards, leaderboards, and real-time analytics, transforming traditional learning into an immersive experience. This project aims to improve student participation, provide educators with real-time insights, and support personalized learning interventions.

2024 - Present

Deep Learning, Computer Vision, Python, Image Processing
Uncertainty-Aware Temporal Transformer for Early Sepsis Prediction

Developed an uncertainty-aware Temporal Transformer for early sepsis risk prediction from multivariate ICU time-series data, integrating masked self-attention and missingness encoding to handle irregular clinical measurements. Evaluated on the PhysioNet/Computing in Cardiology Challenge 2019 dataset for robust early detection.

2023- 2024

Django, React, User Authentication

Discere

Developing Discere, a full-stack web application designed to help students study efficiently by creating flashcards and quizzes. Built with Django (backend) and React (frontend), the platform offers a seamless, interactive user experience. Key features include user authentication, progress tracking, and custom quiz generation, enabling personalized learning and improving study outcomes.
